for Compilinខ្ History of C++

So far you have used Python. Now going to learn C++.

Created somewhere in 1979-1983.

Loops while

Compilin

History of C++

- Created somewhere in 1979-1983.
- Based on C (created 1972).

History of C++

- Created somewhere in 1979-1983.
- Based on C (created 1972).
- Going to be learning C++11 (approved 2011).

History of C++

- Created somewhere in 1979-1983.
- Based on C (created 1972).
- Going to be learning C++11 (approved 2011).
- C++14 has been approved (2014).
 - No support yet.
- 99.9% backwards compatible.
 - All the way to C.

Arrays

while

Compiling

Expectations

- All students are expected to learn some C++.
- In future weeks we will be looking at generic programming concepts.
 - Sorting.
 - Searching.
 - Data structures.
- Those weeks will be taught in Python and C++.
 - Everyone else will have some mandatory C++ tasks.
 - BIT students can choose Python or C++ most tasks.
 - Will be specified at the time.
- BIT will not be examined on C++ code.
 - May be examined on language differences.
 - High/low languages.
 - Compiling.
 - Static/dynamic typing.
 - Stack/heap memory.

Languages

C++

Syntax Conditional Arrays

> Loops while for

Most significant difference...

- C++ is statically typed.
 - Python is dynamically typed.
- In Python variables keep track of values AND type.

- In C++ variables have one type forever.
 - Have to specify type when creating.

```
int     var1 = 42;
string var2 = "foo";
float     var3 = 0.123;
```

Data types

In C++ have to specify a variable's type.

- So what types are available?
- Thousands (at least).
 - You can create your own.
- Few standard ones.
- Most basic data types are called primitive types.

Syntax
Conditionals
Arrays
Loops
while
for

Primitive types

Туре	Bytes	Values
bool	1	true/false
char	1	'a', 'Z', '6', '+'
int	4	$-2147483647 \rightarrow 2147483647$
unsigned int	4	$0 \rightarrow 4294967295$
float	4	1.234, -0.0001
double	8	1.23456789, -0.000000001
void		

Sizes are correct for a 32bit machine.

Languages

C++

Syntax

Conditional: Arrays Loops while for

Moving from Python to C++.

- Not as bad/scary as it seems.
- Same basic structure.
- Slightly different syntax.

Loops

for

Compilin

if statements

Same rules as Python.

- Slightly different syntax.
- and is now &&.
- or is now | |.
- == is still ==.

```
a = 1
b = 2

if a == b and b > 0:
    print('Hello World )
```

Arrays Loops

for

if statements

Same rules as Python.

- Slightly different syntax.
- and is now &&.
- or is now | |.
- == is still ==.

```
a = 1
b = 2

if a == b and b > 0:
    print('Hello World )
```

```
int a = 1;
int b = 2;

if( a == b && b > 0 )
{
    cout << "Hello World!" << endl;
}</pre>
```

for Compiling

Coventry University

Arrays

Similar to Python lists.

Can't be resized.

```
sequence = [1, 2, 42, 69, 8]
sum = 0

for i in range(len(sequence)):
    sum += sequence[i]
```

```
int sequence[5] = {1, 2, 42, 69, 8};
int sum = 0;

for( int i=0; i<5; i+=1 )
{
    sum += sequence[i];
}</pre>
```

Arrays II

David Croft

Languages

Syntax

Arrays

Three ways to create a C array.

Just supply size

```
arrayOfInt[3];
int
char arrayOfChars[5];
float arrayOfFloats[2];
```

Supply size and initialisation list

```
arrayOfInt[3] = { 42, 69, 12 };
int
char arrayOfChars[5] = { 'A', 'z', '9' };
float arrayOfFloats[2] = { 1.23, 0.001, 8.1 };
```

Just initialisation list (will figure out the size)

```
arrayOfInt[] = { 42, 69, 12 };
int
char arrayOfChars[] = { 'A', 'z', '9' };
float arrayOfFloats[] = { 1.23, 0.001, 8.1 };
```

Arrays

Loon

while

for

Compilin

New and improved!

So far looked at the old style arrays.

- Carried forward from C.
- Still used today.
- C++o3 introduced an alternative.
 - STL arrays.

Arrays Loops

Compiling

New and improved!

So far looked at the old style arrays.

- Carried forward from C.
- Still used today.
- C++o3 introduced an alternative.
 - STL arrays.

```
#include <array>
using namespace std;
int main()
{
    int oldArray[5] = \{1,2,3,4,5\};
    array < int, 5 > newArray = \{\{1, 2, 3, 4, 5\}\};
    cout << oldArray[0] << " " << newArray[0] << endl;</pre>
    return 0;
```

There's two of them?

Two types of arrays.

- Old style arrays are still very common.
 - Legacy.
 - Want you to start off using the new ones.
- What was wrong with the old ones?
- New arrays are safer.
 - Avoid overflows.
- Easier to use.
 - Sorting, searching, reversing, iterating etc.
- Are backwards compatible with old code.

Languages

 $C+\cdot$

Syntax
Conditionals
Arrays
Loops
while

Problem, C++ arrays have a set size.

Saw we had to provide a size when declaring arrays.

Languages

 $C+\cdot$

Syntax
Conditionals
Arrays
Loops
while
for

Problem, C++ arrays have a set size.

Saw we had to provide a size when declaring arrays.

C++ does have 'arrays' that can be resized.

- Called vectors.
- Uses arrays inside.

Problem, C++ arrays have a set size.

Saw we had to provide a size when declaring arrays.

C++ does have 'arrays' that can be resized.

- Called vectors.
- Uses arrays inside.

Vectors

```
#include <array>
#include <vector>
using namespace std;
int main()
{
    array < int, 5 > myArray = \{\{1, 2, 3, 4, 5\}\};
    vector<int> myVector = {{1,2,3,4}};
    myVector.push_back(5);
    cout << myArray[0] << endl;</pre>
    cout << myVector[0] << endl;</pre>
```

Vectors II

David Croft

Languages

C+-

Syntax Conditiona

Conditional
Arrays
Loops
while
for
Compiling

C++ vectors are the closest thing to Python lists.

- If you are moving to C++ from Python easier to use vectors?
- append() → push_back() and emplace_back()
- pop() → pop_back()
- slicing → resize()

while loops

Same rules as Python.

- Slightly different syntax.
- Brackets ().
- Braces {}.
- Semicolons ;.

```
counter = 0
while counter < 10:
    print('Hello World!')
    counter += 1</pre>
```

```
int counter = 0;
while( counter < 10 )
{
    cout << "Hello World!" << endl;
    counter += 1;
}</pre>
```

for loops

- C++ has two kinds of for loops.
 - One type similar to Python for loops.
 - Actually a range-based loop.
 - Will be covered later.
 - One type similar to a while loop.

Languages

C++

Syntax
Conditionals
Arrays
Loops
while
for

The original C++ for loop.

```
for loops
```

```
for( int counter=0; counter<10; counter+=1 )
{
   cout << "Hello World!" << endl;
}</pre>
```

Syntax
Conditionals
Arrays
Loops
while
for

for loops

```
The original C++ for loop.
```

Seems very different to the python loop.

```
for counter in range(10):
    print('Hello World!')
```

```
for( int counter=0; counter<10; counter+=1 )
{
   cout << "Hello World!" << endl;
}</pre>
```

The original C++ for loop.

- Seems very different to the python loop.
- Lots of commonalities.

for loops

```
for counter in range(10):
    print('Hello World!')

for counter in range(0,10,1):
    print('Hello World!')

for( int counter=0; counter<10; counter+=1 )
{
    cout << "Hello World!" << endl;
}</pre>
```

Languages

C+-

Syntax
Conditionals
Arrays
Loops
while
for

The original C++ for loop.

- Seems very different to the python loop.
- Lots of commonalities.
- Also to while loops.

for loops

```
for counter in range(10):
    print('Hello World!')
for counter in range(0,10,1):
    print('Hello World!')
for( int counter=0; counter<10; counter+=1 )</pre>
{
    cout << "Hello World!" << endl;</pre>
int counter = 0;
while( counter < 10 )</pre>
{
    cout << "Hello World!" << endl;</pre>
    counter += 1;
```

Languages

C+

Syntax Conditional

Arrays
Loops
while
for
Compiling

The new C++11 ranged for loop, for iterating over a sequence.

- Less powerful that the old style.
- **E**asier.
- while > for > ranged for

Ranged for loops

```
sequence = [1,2,3,4,5]
for i in sequence:
    print( i )
```

```
int main()
    array<int,5> sequence =
        \{1, 2, 3, 4, 5\};
    for( int i : sequence )
        cout << i << endl;</pre>
    }
    return 0;
```

Compiling

Compiling

C++ code has to be compiled before it is run.

- So does Python it just happens automatically.
- Compiler converts C++ code into machine code.
- Many IDEs handle compiling for you.
 - Visual Studio, Eclipse etc.
