2015

Overview

1 Introduction

2 Fibonacci example

3 Module content

Introduction to algorithms module.

What is an algorithm?

Introduction

examp

Module content

Introduction to algorithms module.

- What is an algorithm?
- Not the same as code.
- Not the same as a program.

Introduction

Module content

Introduction to algorithms module.

- What is an algorithm?
- Not the same as code.
- Not the same as a program.

Task/algorithm/code

David Croft

Introduction

Fibonacci example

Module content A task is a problem that needs to be solved.

■ I.e. bake me a cake.

Introduction

Fibonacci example

Modul conter A task is a problem that needs to be solved.

■ I.e. bake me a cake.

An algorithm is a generalised set of instructions to perform a specific task.

- A strategy to solve a given problem.
 - Many different strategies to solve same task.
- Like a recipe.

Task/algorithm/code

David Croft

Introduction

Fibonacci example

conte

A task is a problem that needs to be solved.

■ I.e. bake me a cake.

An algorithm is a generalised set of instructions to perform a specific task.

- A strategy to solve a given problem.
 - Many different strategies to solve same task.
- Like a recipe.

Code is a specific set of instructions to perform a specific task.

- An implementation of a strategy in a specific language/system.
- Have to adapt the recipe to your kitchen/oven etc.

Introduction

Fibonacci example

Module content

Task - calculate the fibonacci sequence.

Fibonacci sequence algorithm

David Croft

Introduction

Fibonacci example

Module conten **Task** - calculate the fibonacci sequence.

Algorithm

- 1 Starting with o and 1.
- 2 Sum the two numbers to make a third.
- Discard the lowest number.
- Repeat from step 2.

Introduction

Fibonacci example

conter

Task - calculate the fibonacci sequence.

Algorithm

- 1 Starting with o and 1.
- 2 Sum the two numbers to make a third.
- 3 Discard the lowest number.
- Repeat from step 2.

Code

```
def fibonacci( a, b ):
    c = a + b
    a, b = b, c

    print( a )
    fibonacci( a, b )
```

```
for( int a=0, b=1, c;
    a>=0;
    c=a+b, a=b, b=c )
{
    cout << a << endl;
}</pre>
```

Module content

David Croft

Introduction

Fibonac exampl

Module content Looking at search algorithms today.

Looking at sorting algorithms in a later week.

Will be tested on some algorithmic concepts.

- Implement simple algorithms.
- Describe advantages/disadvantages of certain algorithms.
- Big O notation.
 - How algorithms scale.
- Calculate an algorithms O() notation.

Introduction

Module content

Thinking algorithmically.

- Learning how to break down a problem into small steps.
- Think through algorithms.
- Evaluate algorithms.
 - Does this algorithm actually work?
